

# Germination

For Preview Only

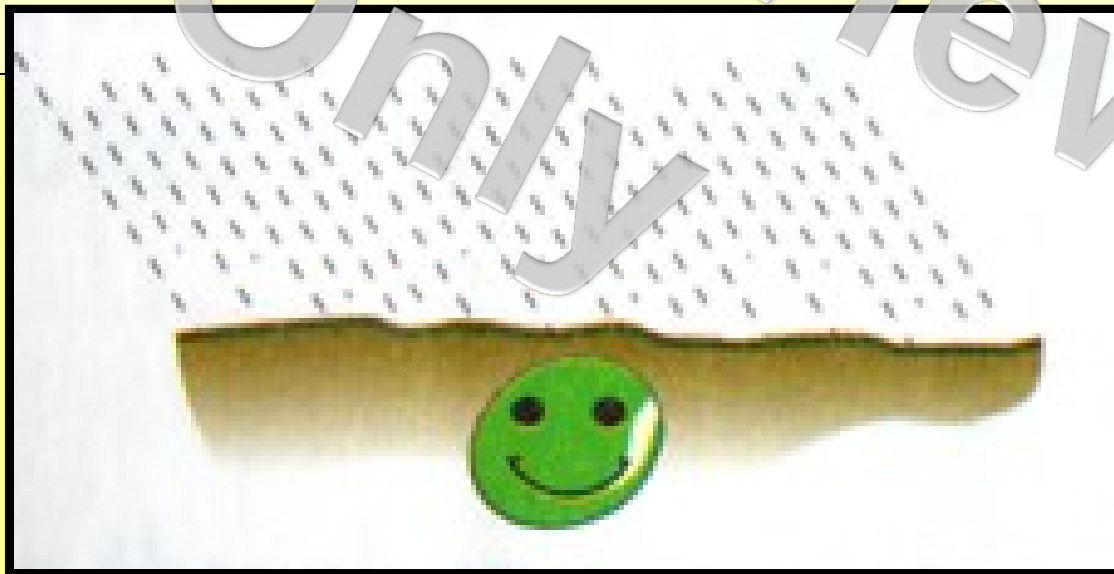

Germination is when a seed starts to grow into a new plant. For germination to occur, the seed needs to have some things.

# Need Water

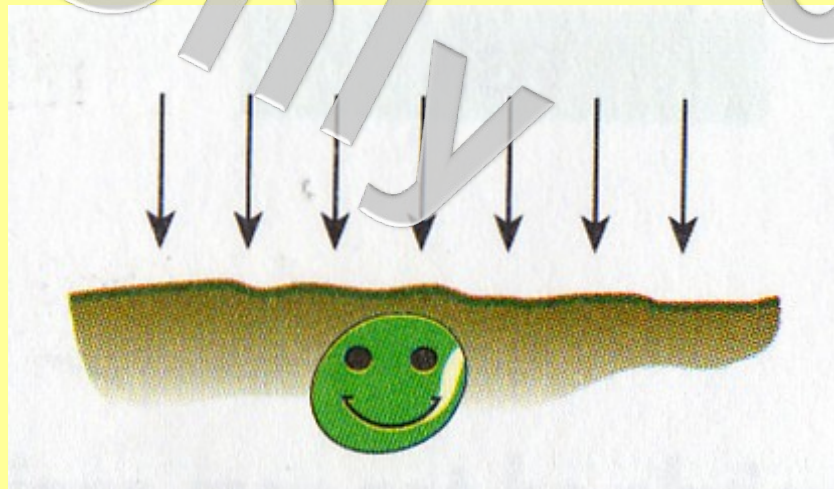

Seeds are very dry and need to absorb water to start growing. Without water the seeds will not grow.

# Need Oxygen

Seeds need oxygen to begin growing. Without oxygen the seed will not grow.

# Need the Correct Temperature

This depends on the plant, but most seeds need some warmth.

# What About Light?

Although plants need light, seeds do not need light in order to germinate. Most seeds are underground in the soil when they germinate!

Once a seed germinates, it should grow into a healthy plant.
